To whom it may concern,

Hope Paasch had informed and recommended me for the role as an Agile Software Developer and I believe I will be well-suited for the job. I have a Bachelor's degree in Electronics and Computer Technology with a Front End certificate from The Iron Yard Academy and two years of web development experience that I've extended towards mentorship.

In my last role with Servosity, I was responsible for building the user facing interface of a brand new portal for accessing clients of different access roles. In addition to excellent programming and creativity, I rely, also, on my extensive knowledge of vanilla JavaScript, React.js, Redux, and a working knowledge in Node/Express.js and MongoDB. I have strong analytical skills that I regularly put into practice through heuristic testing and observation of user interfaces and interactions.

In addition to my technical skills listed above, I also possess strong interpersonal and social communication skills and can readily interact with coworkers and other management alike to achieve desired results. I have a strong detail focus and excellent time management skills, allowing for fast completion of projects.

I'm certain you will be impressed by the skills I can offer as an Agile Software Developer. I anticipate meeting with you in person soon to discuss my potential candidacy and what I have to offer. Thank you for your consideration.

Sincerely,

Joshua Abu
